Wrap 7

WRAP 7

The Wrap 7 is designed according to a new concept. The machine wraps a tube of foil in which the bales are positioned with a loading unit. A large stack can be wrapped with a light machine, easy to handle.

Wrap 7 is made primarily for wrapping of big straw bales, it can however also be used for wrapping all other types of rectangular bales.

When a stack is positioned on the machine, it can either be Operated from the remote control in the cab of loading unit, so that the machine is ready for the next bales can be wrapped.

The machine is equipped with a hydraulic support so that it is easy to re-switch from working mode to transport mode.

During transport the machine can be lowered so that it is easy to get under the bridges.

Wrap 7 is transported sideways, which secures a small transport width.

WRAP 7 advantages:

- Large capacity
- Fixed foil
- Minimal space for storage
- Easy to remove the foil
- Ventilation channels at the top

Technical data:

Length:	8,34 m
Width:	3,00 m
Height during transport:	5,50 m
With lift::	3,75 m
Motor:	Hatz 25HK
Tyre mounting::	10.0/75 x 15,3/10
Capacities	120 ton/Hour
Foil consumption by 4-5 layer	70 bales/roll
*) Foil 1000mm x 1000m/30mµ	
*) Bottom foil 300 m x 2600mm/110 mµ
