Wrap 12

WRAP 12

The machine can wrap 12 big bales in each stack. The stack is then 8,3 m wide and 5.2 m tall.

The Wrap 12 wrapper winds a tube of plastic, next a loading implement positions a bale in the tube. In this way a big stack can be wrapped using one machine that is easy to handle.

Wrap 12 is made primarily for wrapping of big straw bales, it can however also be used for wrapping all other types of rectangular bales.

When a stack is positioned on the machine, it can either be operated from the remote control in the cab of loading unit, so that the machine is ready for the next bales can be wrapped.

The machine is equipped with a hydraulic support so that it is easy to re-switch from working mode to transport mode.

During transportation the machine can be collapsed to a height of 3,65 meters.

Wrap 12 is transported sideways, which secures a small transport Width.

Options: Bale fork and foil basket.

Wrap 12 advantages:

- Large capacity
- Fixed foil
- Minimal space for storage
- Easy to remove the foil
- Ventilation channels at the top

Technical specification:

Length	12,00 meter
Width	3,00 meter
Height	7,15 meter
Length during transport	13,00 meter
Height during transport	3,78 (3,48) meter
Weight	4.000 kg
Engine	Hatz 25HK, diesel
Tire mounting	460/60-15,5
Capacity	150 tons/hour
