Wrap 5

Wrap 5

The Wrap 5 wrapper is designed according to a new concept. The machine wraps a tube of foil in which the bales are positioned with a loading unit. A large stack can be wrapped with a light machine, easy to handle.

Wrap 5 is made primarily for wrapping of big straw bales, it can however also be used for wrapping all other types of rectangular bales and round bales size 1,25 m and 1,8 m.

When a stack is positioned on the machine, it can either be operated from the remote control in the cab of loading unit or a sensor activates the wrapper so that the next bales can be handled.

The machine is equipped with a hydraulic support so that it is easy to re-switch from working mode to transport mode.

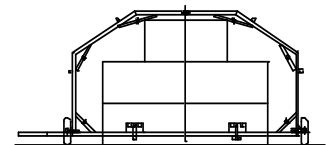

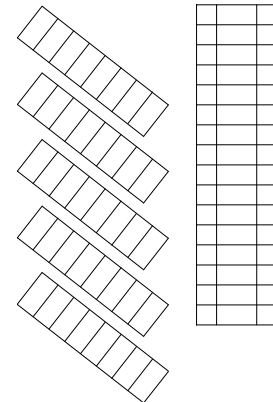

During transport the machine can be lowered so that it is easy to get under the bridges. *)extra equipment. Wrap 5 is transported sideways, which secures a small transport width.

Wrap 5 advantages:

- Large capacity
- Fixed foil
- Minimal space for storage
- Easy to remove the foil.
- Ventilation channels at the top
- Easy and fast conversion to transport.

Tekniske data:

Length	8340 mm
Width	3000 mm
Height	4200 mm
Height during transport *)extra equipment	3750 mm
Tyre mounting	10.0/75 x 15,3/10
Motor	Ruggerini 19 HK
Capacity	150 tons/hour
Usage of plastic bei 4 to 5 layers	50-55 bale/roll
*) plastic 1000mx1000mm/30mμ	
*) basefilm 300m x 2600mm/110mμ
